## ABSTRACT OF THE DISCLOSURE

The present invention provides a method and a circuit for driving  
5 a color liquid crystal display in a normal driving mode and a power saving  
mode, wherein in the normal driving mode, voltages corresponding to  
image display data are applied to data electrodes of the color liquid crystal  
display, and wherein in the power saving mode, voltages corresponding to  
highly significant bit signals of the image display data are applied as  
10 display data signals to the data electrodes.
